Capacity	120 cups/h cappuccino
Technical information	380-415 V, 6,0 kW, 3NPE, 50/60 Hz, 70 dB CW: 3/8"

Description

Metos Egro Next Quick Milk is an automatic espresso machine that combines clock-accurate, Swiss filtration technology with modern design and extreme ease of use. This model comes with ready-made fitting parts for the optional Quick Milk -milk cooler. The machine has two bean hoppers, 1 kg each, and a recommended daily capacity of 250 cups. The width of the device is only 300 mm, so it can be installed in a really small space. Standard drinks include espresso, cafe creme, cappuccino, latte and cafe Americano. With the help of the optional powder container, cocoa and other powdered beverages can also be included in the beverage selection.

Metos Egro Next, which makes coffee from fresh beans, offers an easy way to offer customers the most popular specialty coffees, always of uniform quality and without unnecessary waiting. The 10-inch touch screen allows you to select coffee with large icons. The basic screen can be set to

either 8 or 16 different coffee drinks that can be selected with the icons. With the help of the informative interface, programming the user's own coffee portions into the device's memory is really quick and easy. In the design of the device, special attention has been paid to the fact that coffee portions are always of uniform quality and that the promised capacity is also realized during peak hours. The machine has separate boilers to heat the water needed for drinks and to produce steam. The bean grinder is self-adjusting and has long-lasting, titanium-coated grinding blades. An advanced milk frothing system monitors the temperature and frothing rate of the milk and always adjusts the final product to the desired level. The machine can also be supplied with a separate steam tap. This provides more opportunities for dose customization, especially in service use.

Thanks to the large bean hoppers and the informative interface, adding raw materials, emptying the waste bin and cleaning routines take just a few minutes a day. Technical data, images or videos can be downloaded via the USB port. You can also control the functions of the device, view operating data and transfer programs from one device to another by phone. Alarms can also be routed to the phone to provide remote information that the device needs user intervention. Metos Egro Next is suitable for restaurants, hotels, conference rooms, staff dining and destinations where high-quality specialty coffees are an important part of the assortment. Thanks to its quiet running sound, compact size and easy cleaning, the Metos Egro Next is also suitable for office use.
