Description

High-Tech double skin under-counter dishwasher is designed for heavy duty use in professional kitchens and restaurants. The digital control panel is easy to use and its signal lights indicate the different cycles. Diagnostic function supports self-monitoring.

In the PLUS version the intermediate break tank is filled by the rinsing water. In the boiler there is no pressure. The rinsing water will be heated up to the desired temperature. Final rinsing will take place with the booster pump. No water is added into the boiler during the final rinse. The temperature of the rinsing water is all the time e.g. 85°C. The boiler will be filled only after the rinsing is finished.

PLUS system is guaranteeing the temperature and best result of the final rinse not depending of the inlet water pressure.
